

Premiere SS820

SS820 Stainless Steel Water Filter System

The SS820 is a high capacity, multi-cartridge stainless steel filter system with scale inhibitor filter cartridges. Ideal for boiler or hot water heating systems because it tackles sediment and scale. The 304 stainless steel housing is electropolished, providing maximum durability. It is resilient to corrosive substances and chemicals. The filter cartridges contain corrosion and scale inhibitor product that removes existing scale deposits, prevents scale, and stops corrosion.

Features

Commercial Grade Filtration

- ✓ Delivers an impressive flow rate of up to 64 gallons per minute
- ✓ Housing is machine welded and electropolished on the inside and out
- ✓ Works for boilers up to 400,000 BTU rating

Corrosion and Scale Inhibitor Cartridges

- ✓ Deep grooves increase surface area, enhance contaminant holding capacity, and promote fuller utilization of the depth-matrix for fewer cartridge change outs
- ✓ The center of the water filter cartridge contains genuine Siliphos® corrosion and scale inhibitor which are polyphosphate silicate spheres
- ✓ Siliphos® forms a thin protective layer on metal surfaces to inhibit deposits of scale and corrosion

Added Benefits

- ✓ Easy flushing, cleaning, and cartridge change
- ✓ For hot or cold water use; chlorinated (municipal) or non-chlorinated (well water) systems
- ✓ Legs included

Specifications

Micron rating	5
Flow rate	64 GPM
Filter life	6 months – 1 year (water dependent)
Size	30" high x 12" diameter
Connection size	2" NPT FIP inlet & outlet
Inlet / Outlet	Inlet center is 14.5" from floor Outlet center is 8" from floor

Contaminant Reduction

- ❖ Cloudiness / turbidity
- ❖ Sediment
- ❖ Dirt
- ❖ Silt
- ❖ Sand
- ❖ Scale
